

We have a full range of **H&S Tools** End prep machines for hire. We stock 57 machines in 5 locations nationwide that range from 20mm to 600 mm diameter. They are self-aligning and self-centering. Rental machines are provided with blades included

End prep machines are used for

Confined spaces. Spark free machining improves safety for adjacent workers

Designed for operations in restricted areas with limited clearance

Improved productivity because they can machine a bevel in 1 to 10 minutes

Machine bevel angle on Elbows & returns with elbow mandrel

Reduced fatigue and improve safety for operators when pipework is in situ. Machining the bevel angle reduces the safety issues with 9inch grinders

Used extensively in hot permit & explosion risk areas

Improved fit-up, QA, and weld-out times

Machining compound angles on heavy wall reduces weld-out time

Machine the bevel angle minimizes foreign debris entering critical path to protect downstream plant

Machine stainless and exotic grade materials that require precision weld prep joints

Machine high alloy materials that will not tolerate a pre-weld HAZ

Match boring for Id transitions
